

Requirements Definition

Record covering requirements architecture and approval

Document field	Value
Project or system	[Enter name]
Document owner	[Name or role]
Version and status	[0.1] Draft / In review / Approved
Last updated	[DD Month YYYY]
Standards reference	ISO/IEC/IEEE 29148:2018 ISO/IEC/IEEE 42010:2022 ISO/IEC 25010:2023 ISO/IEC/IEEE 15288:2023 or 12207:2026

How to use this template Replace bracketed guidance, remove sections that do not apply, record the reason for tailoring, and retain evidence links. Approval means the document content has been reviewed; it does not by itself establish certification or standards conformance.

Target completion time 15 to 30 minutes for a small or routine change. Expand only where risk, novelty, regulation, or complexity requires it.

Standards applied

This template applies selected industry practices proportionately. Complete records support governance and assurance but do not, by themselves, demonstrate formal conformity or certification.

Standard	Applied here	Practical tailoring
ISO/IEC/IEEE 29148:2018	Captures stakeholder need, scope, testable requirements, constraints, and acceptance.	One combined requirements table replaces separate specifications.
ISO/IEC/IEEE 42010:2022	Records stakeholders, concerns, boundaries, design, decisions, and rationale.	One architecture summary and diagram replace a full set of viewpoints.
ISO/IEC 25010:2023	Prompts measurable product quality needs.	Only relevant quality characteristics are recorded.
ISO/IEC/IEEE 15288:2023 or 12207:2026	Links definition, design, verification, operation, and approval.	Use 15288 for systems; use 12207 for software-focused work.

Decision summary

Field	Complete this
Problem and outcome	[What problem are we solving and what measurable outcome is expected?]
Owner and users	[Who owns the outcome and who uses or depends on it?]
In scope	[What is included?]
Out of scope	[What is explicitly excluded?]
Target release	[Date, release, or increment]

Requirements

Keep only necessary, testable requirements. Use additional rows only when they change the design or acceptance decision.

ID	Requirement or constraint	Success or acceptance measure	Priority
R1	[Required user or system behaviour]	[Observable pass condition]	Must
R2	[Required integration or data outcome]	[Observable pass condition]	Must
Q1	[Relevant security, reliability, performance, usability, maintainability, or safety target]	[Measured target and conditions]	Must / Should

Architecture and implementation

Question	Answer
Solution summary	[What will change and how will it work?]
Boundary and dependencies	[Users, systems, services, suppliers, networks, and trust boundaries]
Data and security	[Data handled, classification, access, secrets, encryption, audit, retention]
Operation and recovery	[Monitoring, support owner, failure behaviour, backup, rollback or recovery]
Diagram or reference	[Paste a simple diagram or link to the authoritative design]

Key decision and tradeoff

Selected approach	Why selected	Alternative not selected	Consequence
[Approach]	[Reason and evidence]	[Alternative and reason]	[Cost, risk, limitation, or debt]

Risks assumptions and open points

Item	Impact	Action or control	Owner and date
[Risk, assumption, dependency, or question]	[Impact if unresolved or incorrect]	[Action or acceptance]	[Owner / date]

Approval to build

Decision	Name or role	Date	Conditions
Approve / Revise / Reject	[Decision owner]	[Date]	[Conditions or none]
